Angular Forms Task – E-Commerce Project

Objective

Apply different Angular form approaches (**Template Driven, Reactive, Signal Forms**) in a real e-commerce scenario.

Task 1: Template Driven Form (Contact Us)

Requirements:

Create a **Contact Us Form** using Template Driven Forms.

Fields:

- Name (required, min length 3)
- Email (required, valid email)
- Message (required)

- Use ngModel
- Add validation
- Show error messages
- Disable submit button if form is invalid
- On submit → display data below the form or in alert

Bonus:

- Reset the form after submit

Task 2: Reactive Form (Checkout Page)

Requirements:

Create a **Checkout Form** using Reactive Forms.

Fields:

- Full Name (required)
- Email (required + email)
- Address:
  - City
  - Street
- Payment Method (select)

- Use FormGroup + FormControl
- Create nested FormGroup for address
- Add validation
- Show errors using:

invalid && touched

Submit:

- If valid → store data in object orderData
- Display order summary below

Bonus:

- Try Using FormBuilder

Task 3: Signal Form (Login / Register)

Requirements:

Create a **Login or Register Form** using Signal Forms.

Fields:

- Email (required + email)

- Password (required)
- (Optional: Username)

- Use signal() as model
- Use form() to create form
- Use [formField] in HTML

Validation:

Use schema:

```
form(this.model, (schema) => {
  required(schema.email);
  email(schema.email);
  required(schema.password);
});
```

Error Handling:

- Show error messages
